**FORM ROLLER FOR PRINTING PRESS**

**ABSTRACT**

5           A form roller for use in an offset lithographic  
printing press comprises a stationary shaft and an  
eccentric roller supported on the shaft for rotation around  
the shaft and for oscillation along the length of the  
shaft. One or more cams are mounted on the shaft for  
10           controlling the operation of the rollers therealong. The  
exterior surface of the roller comprises an impregnated  
elastomeric material.
